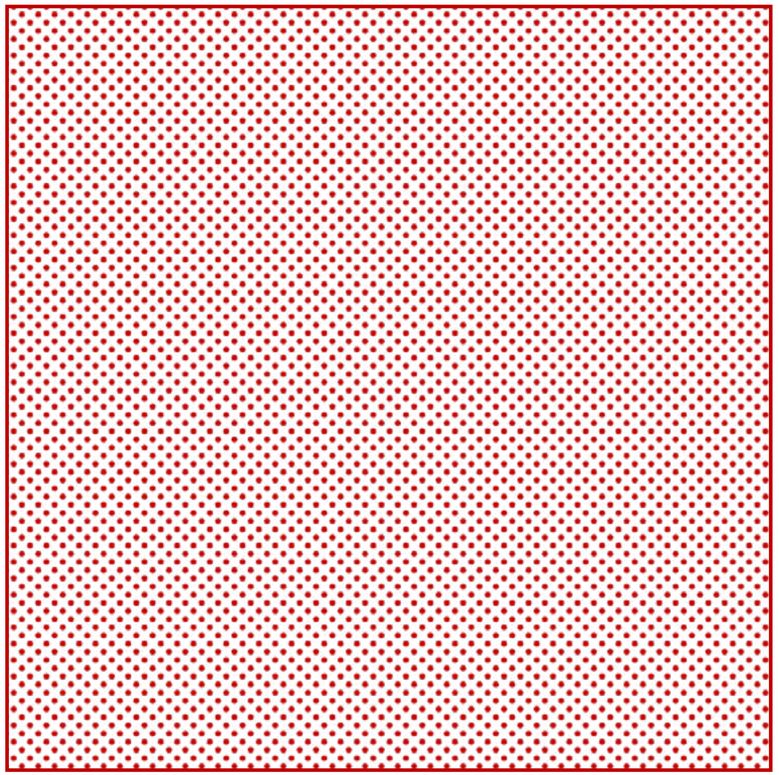
TEXTURE FILES

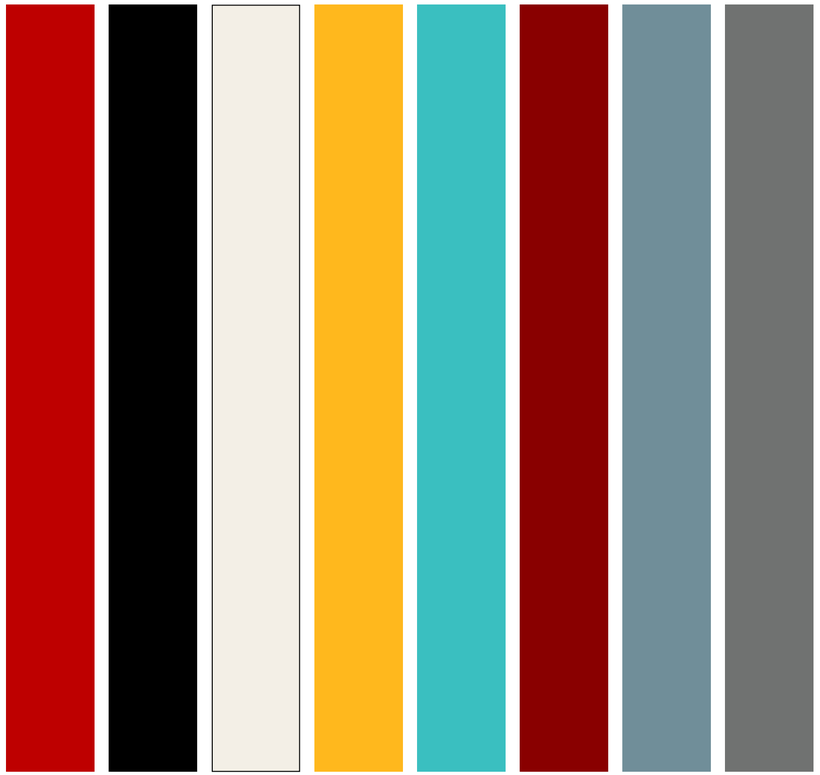
PANEL FILES

These are large fields of the dot texture that are ready to be used in various applications. Available as vector AI files or transparent PNGs, these should satisfy most layout needs.



COLORS

Patterns are available for all colors of the enrollment brand.



COLOR MODES

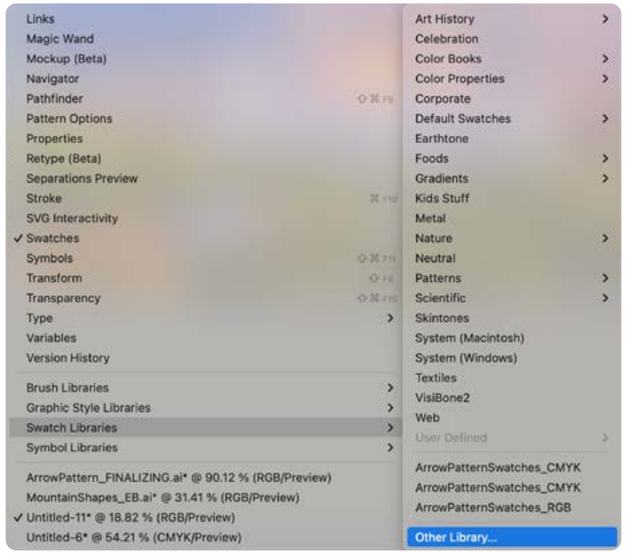
The EPS files are separated into CMYK versions and RGB versions. Use the CMYK versions for print applications, and the RGB versions for web and other digital applications.

The PNG files are only available in RGB, as PNG files do not support the CMYK color space.

WORKING WITH THE PATTERN SWATCHES

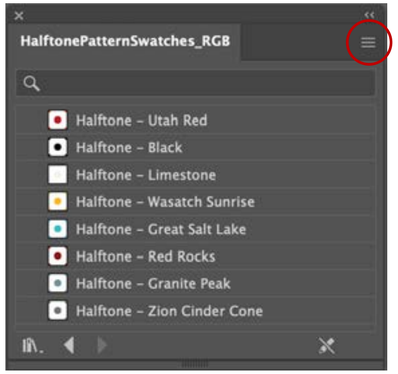
IMPORT THE SWATCH FILES INTO ILLUSTRATOR

Navigate to **Window > Swatch Libraries > Other Library...** and select the appropriate swatch library (RGB for digital, CMYK for print).

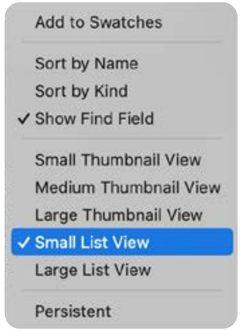


ACCESS THE SWATCH PANEL

The panel of swatches will appear in your workspace.

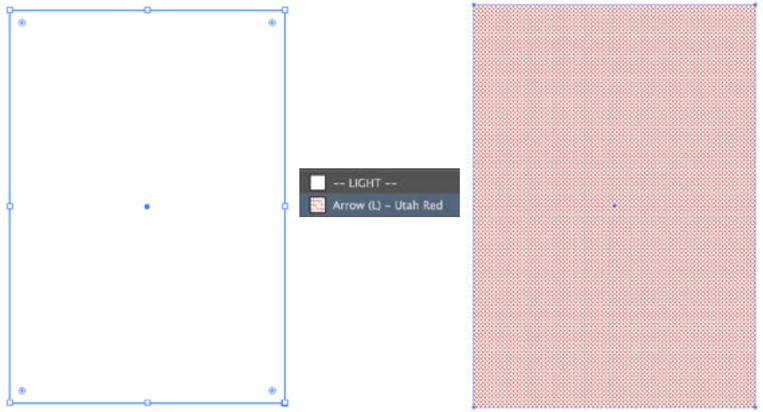


It will be easier to navigate if you select "Small List View" from the drop-down menu.

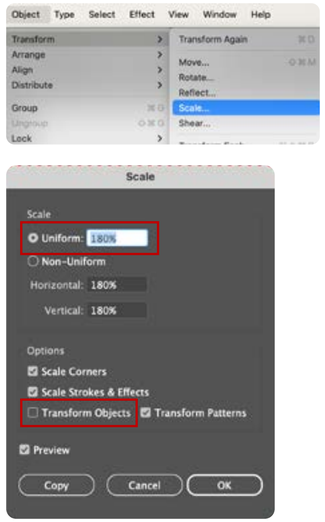


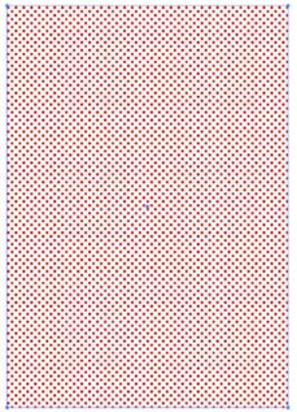
CREATE A FILL

Draw a shape that's the desired size and select a fill swatch from the panel and it will fill the shape with the selected pattern.



FINE-TUNING THE FILL

If you need to change the size of the pattern within the shape, navigate to **Object > Transform > Scale** with the shape selected. This will give the option to adjust the scale to a percentage of its current size.




Make sure that "Transform Objects" is unchecked so that it doesn't also change the scale of the container shape.
